

Putting Home Energy Data at your Fingertips.

We are setting the new standard of Property Energy Management starting with monitoring both the consumption rate and the marketplace price per gallon.

Our embedded wireless sensors and web portal and phone apps allow you to safely make better buying decisions, decide faster, and save money on quality fuel oil services.

Heating Fuel Management for Property Managers

Monitoring

Anomaly Detection: Critical Notifications when it matters MOST

Knowing your property's consumption rate of oil is not sufficient. Combining outside weather conditions with consumption rate in real-time helps you avoid running out of fuel causing costly damage from frozen and burst pipes.

Failures of proper home heating include:

Low Set-Point temperature vs. Measured Environmental Temp., Failure of the boiler system, Etc.

Critical Fuel Level Alerts

Know well before your tanks run dry! Using measured data and consumption rate information an automated alert is provided when the fuel tank reaches levels of 50% of total fill volume, 25%, and 15%. Additional people can be added to notifications to ensure a single manager isn't a single point of failure to a refill.

Real-Time Analytics for your Team and your Renters

Share your data with specific people in real-time, empowering the team to make educated, timely decisions to avoid added costs, delays and unnecessary expenses for in-person travel to verify systems are operating normally.

Avoidable Damage from Burst Pipes

Competitive Refill Management

Three Management Modes

Optional refill management through our competitive marketplace. Manage your property's energy using one of three convenient service modes: Energy Management, Energy Monitoring, or Utility.

Mode	Schedules Delivery	Provides Payment
Manage	Prop Mgr	Prop Mgr
Monitor	Renter	Renter
Utility	Automatic	Renter

Lowering Your Energy Bill

Energy cost savings is a core mission of Heat Oracle. You & your customers will use Heat Oracle Marketplace to drive purchasing decisions towards the lowest costs in the market. Heat Oracle's predictive analytics ensure optimal refill timing strategies to provide the optimal intersection of dwelling safety and cost minimization.

Scheduling Independence, Free your calendar

As a Property Manager there's too much on your calendar already. Let Heat Oracle keep your homes heated while we save you money to let you focus on what you do best – growing your real estate empire.
